

# Shade Adaptability During Whitening Test\*

The following pictures of a tooth restored with Transcend composite show that Transcend composite has the capability of adjusting itself to continue to harmoniously match the surrounding dentition during a whitening process.

\*For this whitening test, the tooth restored with Transcend composite was exposed to room temperature 10% carbamide peroxide whitening gel for a total of 8 hours. After this time, the tooth was taken out of the gel, rinsed, and stored in room-temperature water. The tooth was put back into water overnight. The process was repeated daily for a set of 4 consecutive days and photographs were taken approximately one hour after each whitening cycle. The carbamide peroxide gel was changed for each round of the whitening study.
