

Course Description

If you are struggling with where to start with implantology we will cover the fundamentals of implant dentistry and how to get your practice started.

If you don't understand which cases to tackle and which ones to refer on, we will cover a simple traffic light system of which cases are easy, moderate or best to send away!

If you want to refresh anatomy and implant techniques, we will cover the latest research and best practices when it comes to surgical implantology.

If you want to learn how to incorporate digital dentistry with your implant practice we will go over the options in scanners, implant guide software and 3D printing.

Understand how to read 3D x-rays and plan safe and effective implant surgery

INTRODUCTION TO IMPLANT DENTISTRY

The Fundamentals

Lecture and Hands-On Workshop
using Pig Jaws over 2 Days

Event Details

Christchurch - 2023
Fri 13th - Sat 14th Oct
14 Hours CPD

On the next day you get your hands dirty and get practical hands-on experience!

On the second day, we will do surgery on pig jaws to take the next step before moving on to your patients

If you are not integrating digital dentistry into your implant armamentarium, you could be selling yourself short. Your patient will benefit from less pain, better prosthetic outcomes and less surgical time.

The Day 1 Lecture is also available as an online lecture and is included for every course registrant.

Dr Ahmad Al-Hassiny

Digital Dentist and Implant Educator

Dr. Ahmad Al-Hassiny is a global leader in digital dentistry and intraoral scanners, carrying out lectures as a KOL for many companies and industry heavyweights.

He uses multiple different implant brands in his clinic, including BioHorizons, Osstem, Neoss, and Nobel Biocare. Dr Ahmad has placed everything from single implants and implant bridges to immediate implants, free-hand or fully guided depending on the case. Everything is done in-house so he is experienced in both the clinical and lab side, including guided implantology software and photogrammetry.

Dr Ahmad understands the difficulty and fear that comes with learning how to place implants. He has been on his own journey to becoming confident with implantology and is fully empathetic to the learning process most dentists go through. Dr Ahmad is fully supportive throughout the learning process and can help you with almost any question you have about the procedure.

He has seen first-hand, through his own work, how adding dental implants to your service offering can improve daily dental practices as well as annual revenue. His presentation style is zero fluff, straight to the point and only things that you **NEED** to know to get started in implant dentistry.

COURSE OUTLINE

Day 1 Lecture

9am - 5pm

- Understand the fundamentals of safe surgery and implantology.
- Dental Implants in General Dental Practice and Implant treatment decision making.
- Become familiar with surgical anatomy, surgical techniques, equipment required, and using CBCT software to plan implant surgery.
- Learn about patient selection, radiographic evaluation and understand which cases are appropriate to tackle and which cases are best to refer.
- Learn about the concept of prosthetically digitally-driven implant planning to ensure the proper position and orientation of each implant fixture for the ideal restoration
- Understand osseointegration, wound healing, flap design, and suturing techniques.
- Be comfortable with discussing implant surgery with patients and comfortable with discussions of postoperative management.
- Dr Ahmad Al-Hassiny shares his case presentations and key learning experiences. The good and the bad!

Day 2 Hands-On Workshop

9am - 5pm

- How to tackle implant surgery safely. Learn everything you need to know about socket augmentation and biomaterials.
- Learn the fundamentals of flap design and how to tackle implant surgery.
- Struggling with which equipment to buy? Learn the armamentarium you need for implant surgery.
- Understand osteotomy, implant burs and components using a surgical kit to carry out and place an implant.
- Extensive hands-on practice on pig jaws raising a flap, osteotomy and placement of implants. Ahmad will show you how to do it, then you practice on your own pig jaw and place as many implants as you like.
- Learn how to properly suture and control soft tissue in implant surgery.
- Hands-on socket augmentation, placing membranes and bone grafting.
