Still the gold standard.

CLEARFIL™ SE BOND was launched in 2000 and became widely known as the world's self-etch gold standard dental adhesive. CLEARFIL™ SE BOND 2 is based upon this unique heritage.

CLEARFIL™ SE BOND 2 has excellent initial bond strength for adhesion to dentine (with the Original MDP adhesive monomer) and the ideal adhesive layer to withstand the increased polymerisation stress created with bulk-fill composites. This ideal combination results in gap-free dentine margins even when bulk-fill composites are used.
