POWDER-FREE TEXTURED LATEX GLOVES

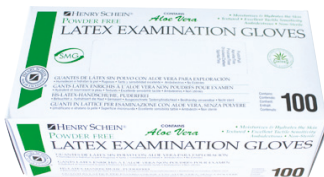

These powder-free, latex gloves possess higher elasticity and higher tensile strength than most comparable gloves in the market. This will ensure better durability of gloves and better comfort, fit and feel for the user if prolonged usage is necessary. The new improved powder-free manufacturing process ensures minimum chlorine smell. The glove has an upper limit of 50mcg/dm² of extractable latex protein which will minimise the chances of users developing a latex allergy reaction. The textured fingers ensure better grip when handling instruments.

SURGICAL

SURGICAL SUTURES

PGA Rapid

Developed for short-term closures, these are ideal for skin and mucosa closings that may benefit from fast suture absorption. They maintain 50% strength at 5 days, 0% at 14 days and are essentially absorbed at 42 days. Processed to absorb quickly with little tissue reaction.
