VITAPAN® EXCELL
Perfect shape. Shade accuracy. Light dynamics.

NEW!

WHAT IS VITAPAN® EXCELL?
What?
• VITAPAN EXCELL is a new generation of MRP composite anterior tooth that boasts a brilliant play of shape, shade and light for natural-looking dentures.

What For?
• VITAPAN EXCELL is perfect for highly aesthetic full, partial and implant-retained dentures.

With What?
• VITAPAN EXCELL Anterior and VITAPAN LINGOFORM Posterior are the matched, multifunctional combination for all common occlusal concepts.

INTRODUCING VITAPAN EXCELL THE NEW TEETH LINE FROM VITA

VITAPAN EXCELL: TOOTH MOULDS WITH VITALITY AND GOLDEN PROPORTIONS
SEE INSIDE FOR MORE DETAILS

L50 MICRO MOTOR
Brushless Micro-Motor Lab Set with Handpiece and Foot Control

A high power, fast and easy to use device for most applications in a dental lab.
• Power output of 7.8N maximum torque
• Auto-cruise, adjustable RPM of 50,000
• Lightweight at 3kg
• Packaging includes the control box, power cord, foot & knee control, handpiece, handpiece stand, wrench and 2 x mounting brackets
• Works for left AND right handed operators

GREAT VALUE!

BA-L50
VITAPAN® EXCELL
Perfect shape. Shade accuracy. Light dynamics.

THE BENEFITS

Naturally Aesthetic Results
- Simple fabrication of highly aesthetic dentures due to lifelike tooth moulds with "golden" proportions

Brilliant Play of Shade and Light
- Brilliant play of shade and light thanks to excellent light dynamics and harmonious shade progression

Very Good Shade Accuracy
- Allows good shade reproduction with remaining natural dentition, due to excellent shade accuracy to the shade guide

High Durability
- Excellent durability you can rely on, thanks to abrasion-resistant MRP composite material

CONCEPTS AND INNOVATIONS

Anterior/Posterior Combination
A perfect combination: VITAPAN EXCELL and VITAPAN LINGOFORM
- For the best prosthetics in shape, shade and function
- Universal use in all prosthetic concepts, thanks to multifunctional design

Occlusion Concepts
- For lingual/balanced occlusion concepts; e.g. according to Gysi, Prof. A. Gerber, APF/TF, ABC

Indications
- Recommended for full and partial dentures
- Recommended for implant-supported dentures

WHAT IS VITAPAN® EXCELL?

What?
- VITAPAN EXCELL is a new generation of MRP composite anterior tooth that boasts a brilliant play of shape, shade and light for natural-looking dentures.

What For?
- VITAPAN EXCELL is perfect for highly aesthetic full, partial and implant-retained dentures.

With What?
- VITAPAN EXCELL Anterior and VITAPAN LINGOFORM Posterior are the matched, multifunctional combination for all common occlusal concepts.

THE PROSTHETIC TOOTH WITH GOLDEN PROPORTIONS

VITAPAN EXCELL allows for:
- Easy replication of the natural symmetry thanks to moulds with a well-balanced length/width ratio
- Convenient reproduction of the tooth position thanks to anterior teeth with “perfectly” aligned tooth axes
Alginate Tray Cleaner

- 20% OFF
- HS-100-5043

Articulating Paper

- 10% OFF
- Super sensitive for marking at any point of articulation and perfect for marking in a wet field
- Smooth, soft, non stick, cushioned surface
- Marks any area, with all materials
- Blue, 14 books per box
- 140 sheets per block
- Thin & X-Thin
- Blue

The TWIST® polisher and the consequent easy and intuitive application.

The resulting two layers of staggered lamellae. The resulting processed are the strengths of this system.

The polisher composition to the material to be effective shape as well as the specific adaptation of generation of polishing instruments. The innovative shape and design.

With the TWIST concept, EVE introduces a new approach to polishing.

High-shining surfaces without altering the surface structure.

The new way of polishing.

Advantage for the user is the extreme flexibility of characteristic for EVE TWIST polishers are the.

The two layers of polishing lamellae interlock during application.

As a result, TWIST polishers become ideal for polishing occlusal and interdental areas.

Another substantial advantage of the TWIST® are their ability to polish while maintaining structure.

Compared to traditional polishing systems, EVE TWIST® simplify any polishing process. They adapt to any surface structure and may therefore be used on any type of surface, as well as its ability to maintain the initial shape of the surface being worked on.

Multiple Possibilities.

One Shape – Three steps system for efficient corrections on any porcelain.

Specially adapted for processing any composite or compomer.

To order telephone 0800 808 855, 8am to 5.30pm | freefax 0508 808 555, 24 hours

The development of CAD/CAM technologies in the laboratory has not only improved the comfort and quality of work but also made it possible to work in a more standardised way. New materials such as hybrids have opened up alternative ways to treat complex and difficult cases. One of these materials – Cerasmart – has proven to be very effective in those indications. In this article, Christian Thie, CDT, explains why he chooses to use this material.

Why and when do you use CAD/CAM restorations in your laboratory? And what do you think are the additional values of CAD/CAM restorations compared to conventional prosthetic treatments?

Most laboratory work can now be done using CAD/CAM technology, thanks to the great range of systems and materials available. It is now easier to plan and design using CAD/CAM, especially large, complex restorations that take considerable skill, time and effort to be modelled by hand. This makes it possible for us to achieve better fit and adaptation than with traditional methods, which are more prone to uneven quality. The results with CAD/CAM are now much more predictable.

In which cases do you choose to use Cerasmart restorations?

Eroded teeth that also present a loss of vertical dimension require a restorative material with high flexural strength. But if the material is too hard it could be detrimental to the antagonist teeth as well as the TMJ because of the high masticatory load. To treat those cases, the choice fell naturally on Cerasmart, a material that can buffer masticatory pressure, inducing little volume wear on the antagonists, but that still has sufficient flexural strength to prevent reduction of the vertical dimension. Patients with complex restorations on implants often present a difficult occlusion with only part of the antagonists still in place. Cerasmart is a particularly good alternative in these cases because it produces monolithic restorations with constant physical properties and reduced chipping.

What are the advantages of Cerasmart in terms of indication, handling and aesthetic outcome?

As mentioned, the choice of indication is dictated by the physical properties of the material. Furthermore, Cerasmart is etchable and can therefore be cemented adhesively. In terms of handling, the material is easy to work with using diamond burs and rubber polishers. A high gloss can then be obtained with DiaPolisher Paste. As for aesthetics, Cerasmart has proven to be a very versatile product. This hybrid material can be designed to be very thin if necessary and, depending on which aesthetics are wanted, different finishing options are available: it can be polished in the original monolithic shade or individualised with GC OptiGlaze Color, or even layered with composite using a cutback technique.

Tips on how to make the use of the material easier

To characterise restorations, the surface texture can be created with diamond burs followed by the application of OptiGlaze Color. Alternatively, Cerasmart restorations can be created in a monolithic way. Here, the polishing is done with goat-hair brushes and DiaPolisher as the polishing agent. The high-gloss finish remains after steam cleaning. Thanks to its unique physical properties, Cerasmart is a perfect alternative to ceramics in many difficult cases. Used with OptiGlaze Color, it also becomes a very effective and aesthetic alternative that constitutes a new long-term solution for many clinical indications.

VITA

V60 i-Line Ceramic Furnace

Features/Benefits

- **Uniquely user-friendly operation** thanks to the touch display and intuitive menu navigation combined with a minimalist design.
- **Set up and get started**: no complicated assembly process – simply connect, switch on and start working!
- **Made in Germany**: with superior engineering skill and outstanding quality.
- **VITA quality**: the finest grade materials and components are used with just one goal: reliability that makes no compromises.
- **Easy servicing**: modular structure, easy access to all wear parts and a neat arrangement of parts that is unrivalled make servicing easier with reduced costs.
- **High-performance technology**: a real workhorse. Extremely robust, with integrated protection against current fluctuations as well as a particularly long-lasting VITA quartz muffle.
- **Focus on the essentials**: a definitive, proven furnace concept that deliberately leaves out expensive additional features. This device concentrates on delivering its core functionality in absolutely reliable fashion.

Vertex™ ThermoSens

A complete denture base solution!

- Virtually unbreakable
- No volume shrinkage
- Easy to repair
- Monomer free
- Easy and quick to polish
- Low absorbent
